PRESS RELEASE

February 2 in Milan is the "FabricAI Day"

The event organized by Relatech in collaboration with Microsoft will provide practical tools, real use cases and guidelines to introduce AI in the factory in a fast, safe and scalable way

"FabricAI Day - From Automation to Actionable Data" is scheduled for February 2 from 11.00 to 17.00 in Milan at Microsoft House

Milan, 26 January 2026 – On 2 February starting at 11.00 a.m. in Milan at Microsoft House, **"FabricAI day – from Automation to Actionable Data"** arrives, the **Relatech event** in collaboration with **Microsoft**, dedicated to industrial innovation leaders, which will provide practical tools, real use cases and guidelines to introduce AI in the factory in a fast, secure and scalable way.

The program includes a day of inspirational keynotes, real use cases, technical insights and a live demo to "touch" the entire industrial data cycle: from collection in plants to transformation into intelligent insights through advanced analysis, using predictive models and prevention mechanisms that improve the efficiency and operational continuity of the factory.

During the event, the FabricAI Platform will be presented, the Microsoft architecture designed to overcome the traditional barriers between OT and IT, which represents the technological standard for Industrial AI. It will be possible to attend an end-to-end presentation to integrate factory data and cloud platforms into a single industrial data layer, generating predictive insights and new automation possibilities.

The FabricAI Day is aimed at CIOs, CTOs, Head of Productions, R&D Managers, Operations Managers, Data & AI Leaders and all professionals involved in the digital transformation of industry, who have the opportunity to obtain tools and opportunities to discuss the adoption of industrial AI.

*"At FabricAI Day we will show how the integration between IT and OT is opening a new era for Industrial AI," says **Tommaso Pozzi, Digital Business Unit Director at Relatech**. For years, the two worlds have followed separate paths: IT optimized for business and data, OT designed for control and operations. Today, true value comes from their convergence. The aim of the event is to offer concrete tools to accelerate the adoption of industrial AI, encourage discussion between innovators and show how in next-generation smart factories integrated technologies can converge in a single platform, profoundly improving production processes, quality and operational performance".*

FabricAI's agenda is divided into moments of strategic vision, qualified networking and live demos, with speeches by experts who will offer insights into market trends, contributions from the academic world and company testimonials. The introduction of the works will be by **Andrea D'Onofrio**, Cloud Platform & AI Lead Manager Microsoft, who will present the role of Microsoft Fabric as an enabling technology for the new generation of smart factories. **Tommaso Pozzi**, Digital Director of Relatech, and **Massimo Erba**, Industrial Automation Director of Relatech, will analyze the industrial evolution underway, in which data and AI are the engine of new manufacturing. This will be followed by an academic analysis of the sector by Prof. **Paolo Pasini** of the SDA Bocconi School of Management and **Marco Taisch** of the Politecnico di Milano.

#BuildYourDigitalFuture

The afternoon will open with a speech by **Pier Luigi Croce**, Cloud & AI Platforms Manager at Microsoft, on the adoption of Fabric by enhancing and optimizing assets and investments. This will be followed by a round table with the testimonies of companies that represent stories of digital transformation. In conclusion, there will be a live demo of the industrial data cycle by **Stefano Brusamolino**, Digital Sight Data and AI Lead at Relatech, and a speech by **Simone Ferrazzo**, IT Senior Advisor at Relatech on how to transform factory data into value through the cloud.

Relatech is a leading provider of enabling digital solutions, active in the markets of Digital Transformation, Industrial Automation and Cybersecurity, supporting SMEs and large companies in their innovation and digital transformation paths, both in Italy and abroad. It offers end-to-end solutions — from the first digital interactions with the outside world to industrial automation — based on advanced technologies such as Artificial Intelligence, Cybersecurity, Cloud, IoT and Big Data, as well as Advisory, ICT Training and Data Analysis services, promoting responsible innovation and sustainable growth. Thanks to a robust R&D ecosystem and strategic partnerships — including Microsoft — the company is leading companies towards a Digital Renaissance, in which technology is accessible and enabling for all.
